

PRACTICAL: 6

- **AIM:** Develop a file program. Program reads address (house no, street, area, district, state, pin) from user in single line and writes each part of address (separated by comma (,)) in new line in to a file. Read file and print it on console.

➤ **CODE:**

```
address = input("Enter your address: ")
```

```
fin = open("abc.txt","w")  
filedata = address.split(",")
```

```
for i in filedata:  
    fin.write("\n" + i + ",")  
fin.close()
```

```
fout = open("abc.txt","r")  
print(fout.read())  
fout.close()
```

➤ **OUTPUT:**

```
Enter your address: 60,Popatbhai ni wadi,Laltanki,Bhavnagar,Gujarat,364002  
  
60,  
Popatbhai ni wadi,  
Laltanki,  
Bhavnagar,  
Gujarat,  
364002,
```
